

# Appendix B. Maximum Permissible Exposure

FCC ID: WBV-AP3X0 Page No. : B1 of B4

Report No.: FR362046

## Maximum Permissible Exposure

### 1.1. Applicable Standard

Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess limit for maximum permissible exposure. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as a mobile device whereby a distance of 0.2 m normally can be maintained between the user and the device.

#### (A) Limits for Occupational / Controlled Exposure

| Frequency Range<br>(MHz) | Electric Field<br>Strength (E) (V/m) | Magnetic Field<br>Strength (H) (A/m) | Power Density (S)<br>(mW/ cm²) | Averaging Time  E 2, H 2 or S (minutes) |
|--------------------------|--------------------------------------|--------------------------------------|--------------------------------|---|
| 0.3-3.0                  | 614                                  | 1.63                                 | (100)*                         | 6                                       |
| 3.0-30                   | 1842 / f                             | 4.89 / f                             | (900 / f)*                     | 6                                       |
| 30-300                   | 61.4                                 | 0.163                                | 1.0                            | 6                                       |
| 300-1500                 |                                      |                                      | F/300                          | 6                                       |
| 1500-100,000             |                                      |                                      | 5                              | 6                                       |

#### (B) Limits for General Population / Uncontrolled Exposure

| Frequency Range<br>(MHz) | Electric Field<br>Strength (E) (V/m) | Magnetic Field<br>Strength (H) (A/m) | Power Density (S)<br>(mW/ cm²) | Averaging Time  E 2, H 2 or S (minutes) |
|--------------------------|--------------------------------------|--------------------------------------|--------------------------------|---|
| 0.3-1.34                 | 614                                  | 1.63                                 | (100)*                         | 30                                      |
| 1.34-30                  | 824/f                                | 2.19/f                               | (180/f)*                       | 30                                      |
| 30-300                   | 27.5                                 | 0.073                                | 0.2                            | 30                                      |
| 300-1500                 |                                      |                                      | F/1500                         | 30                                      |
| 1500-100,000             |                                      |                                      | 1.0                            | 30                                      |

Note: f = frequency in MHz; \*Plane-wave equivalent power density

#### 1.2. MPE Calculation Method

$$E (V/m) = \frac{\sqrt{30 \times P \times G}}{d}$$
 Power Density:  $Pd (W/m^2) = \frac{E^2}{377}$ 

E = Electric field (V/m)

P = Average RF output power (W)

G = EUT Antenna numeric gain (numeric)

**d** = Separation distance between radiator and human body (m)

The formula can be changed to

$$Pd = \frac{30 \times P \times G}{377 \times d^2}$$

From the EUT RF output power, the minimum mobile separation distance, d=0.2m, as well as the gain of the used antenna, the RF power density can be obtained.

Report No.: FR362046

#### 1.3. Calculated Result and Limit

EUT 1 (Model No. AP370)

For 5GHz UNII Band:

Antenna Type: PIFA Antenna

Max Conducted Power for IEEE 802.11ac MCS0, Nss1 80MHz / Chain 4+ Chain 5+ Chain 6: 16.98dBm

| Antenna<br>Gain (dBi) | Antenna Gain<br>(numeric) | Average<br>Output Power<br>(dBm) | Average<br>Output Power<br>(mW) | Power Density<br>(S)<br>(mW/cm²) | Limit of Power<br>Density (S)<br>(mW/cm²) | Test Result |
|-----------------------|---------------------------|----------------------------------|---------------------------------|----------------------------------|---|-------------|
| 4.54                  | 2.8445                    | 16.9790                          | 49.8771                         | 0.028239                         | 1   | Complies    |

For 5GHz ISM Band:

Antenna Type: PIFA Antenna

Max Conducted Power for IEEE 802.11a / Chain 4+ Chain 5+ Chain 6: 28.86dBm

| Antenna<br>Gain (dBi) | Antenna Gain<br>(numeric) | Average<br>Output Power<br>(dBm) | Average<br>Output Power<br>(mW) | Power Density<br>(S)<br>(mW/cm²) | Limit of Power<br>Density (S)<br>(mW/cm²) | Test Result |
|-----------------------|---------------------------|----------------------------------|---------------------------------|----------------------------------|---|-------------|
| 4.54                  | 2.8445                    | 28.8565                          | 768.5113                        | 0.435112                         | 1   | Complies    |

For 2.4GHz Band:

Antenna Type: PIFA Antenna

Max Conducted Power for IEEE 802.11b / Chain 1+ Chain 2+ Chain 3: 28.35dBm

| Antenna<br>Gain (dBi) | Antenna Gain<br>(numeric) | Average<br>Output Power<br>(dBm) | Average<br>Output Power<br>(mW) | Power Density<br>(S)<br>(mW/cm²) | Limit of Power<br>Density (S)<br>(mW/cm²) | Test Result |
|-----------------------|---------------------------|----------------------------------|---------------------------------|----------------------------------|---|-------------|
| 4.42                  | 2.7669                    | 28.3519                          | 684.2161                        | 0.376828                         | 1   | Complies    |

#### **CONCULSION:**

Both of the WLAN 2.4GHz Band and WLAN 5GHz Band can transmit simultaneously, the formula of calculated the MPE is:

CPD1 / LPD1 + CPD2 / LPD2 + .....etc. < 1

**CPD** = Calculation power density

LPD = Limit of power density

Therefore, the worst-case situation is 0.376828 / 1 + 0.435112 / 1 = 0.81194, which isless than "1". This confirmed that the device comply with FCC 1.1310 MPE limit.

FCC ID: WBV-AP3X0 Page No. : B3 of B4

Report No.: FR362046

For EUT 2 (Model No. AP390)

For 5GHz UNII Band:

Antenna Type: Dipole Antenna

Max Conducted Power for IEEE 802.11ac MCS0, Nss1 40MHz / Chain 4+ Chain 5+ Chain 6: 16.88dBm

| Antenna<br>Gain (dBi) | Antenna Gain<br>(numeric) | Average<br>Output Power<br>(dBm) | Average<br>Output Power<br>(mW) | Power Density<br>(S)<br>(mW/cm²) | Limit of Power<br>Density (S)<br>(mW/cm²) | Test Result |
|-----------------------|---------------------------|----------------------------------|---------------------------------|----------------------------------|---|-------------|
| 3.30                  | 2.1380                    | 16.8792                          | 48.7437                         | 0.020743                         | 1   | Complies    |

For 5GHz ISM Band:

Antenna Type: Dipole Antenna

Max Conducted Power for IEEE 802.11a / Chain 4+ Chain 5+ Chain 6: 28.86dBm

| Antenna<br>Gain (dBi) | Antenna Gain<br>(numeric) | Average<br>Output Power<br>(dBm) | Average<br>Output Power<br>(mW) | Power Density<br>(S)<br>(mW/cm²) | Limit of Power<br>Density (S)<br>(mW/cm²) | Test Result |
|-----------------------|---------------------------|----------------------------------|---------------------------------|----------------------------------|---|-------------|
| 3.30                  | 2.1380                    | 28.8638                          | 769.8001                        | 0.327588                         | 1   | Complies    |

For 2.4GHz Band:

Antenna Type: Dipole Antenna

Max Conducted Power for IEEE 802.11n MCS0 20MHz / Chain 1+ Chain 2+ Chain 3: 26.25dBm

| Antenna<br>Gain (dBi) | Antenna Gain<br>(numeric) | Average<br>Output Power<br>(dBm) | Average<br>Output Power<br>(mW) | Power Density<br>(S)<br>(mW/cm²) | Limit of Power<br>Density (S)<br>(mW/cm²) | Test Result |
|-----------------------|---------------------------|----------------------------------|---------------------------------|----------------------------------|---|-------------|
| 3.60                  | 2.2909                    | 26.2546                          | 422.1440                        | 0.192491                         | 1   | Complies    |

#### **CONCULSION:**

Both of the WLAN 2.4GHz Band and WLAN 5GHz Band can transmit simultaneously, the formula of calculated the MPE is:

CPD1 / LPD1 + CPD2 / LPD2 + .....etc. < 1

**CPD** = Calculation power density

LPD = Limit of power density

Therefore, the worst-case situation is 0.192491 / 1 + 0.327588 / 1 = 0.520079, which isless than "1". This confirmed that the device comply with FCC 1.1310 MPE limit.
